

Project Design Phase-II Data Flow Diagram & User Stories

Date	28-06-26
Team ID	24A55A4203
Project Name	Visitor Management System
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

User Stories

The following matrix represents the structured product backlogs compiled for application feature sets and deployment sprint releases:

User Type	Epic / Module	ID	User Story / Task	Acceptance Criteria	Priority	Release
Host Employee	Pre-Registration	USN-1	As an employee host, I can pre-register upcoming visitor profiles into ServiceNow so security knows they are arriving.	Saves guest rows into custom table containing visitor's name, company, and expected date.	High	Sprint-1
Host Employee	Validation UI	USN-2	As an employee host, I want input phone parameters validated dynamically to eliminate administrative record errors.	Applies regex formatting rules via Client Scripts before table submission.	Medium	Sprint-1
Security / Desk	Check-In Desk	USN-3	As a front-desk receptionist, I can shift log states to 'Checked In' with a single button click when guests arrive.	UI Action changes record state parameter instantly and saves context.	High	Sprint-1
Security / Desk	Alert Dispatches	USN-4	As a front-desk receptionist, I want automated notification alerts sent to security managers when an unexpected guest checks in.	Triggers business email rules immediately when visitor state changes.	High	Sprint-1
Application Admin	Access Logs	USN-5	As a system admin, I want strict ACL security rules on logs to prevent unauthorized personnel from inspecting data.	Restricts table read permissions to explicitly assigned security roles.	High	Sprint-2
Application Admin	Dashboards	USN-6	As a system admin, I want a live analytics dashboard monitoring active guest counts vs pending check-ins.	Builds standard platform performance dashboard counting active session parameters.	Low	Sprint-2
